

Here's What Customers Say About Arrow Pipeline Repair

"Arrow Pipeline's can-do attitude, knowledge and determination, played a significant part in the success of an incredibly complex project—relining 200 feet of cast iron sewer main buried 8' beneath our hospital. Arrow completed this project on time and on budget."

Mike Engel
UCSD Thornton Hospital
La Jolla, California

"Arrow Pipeline worked at night to repair a broken sewer line 14' deep next to the gorilla exhibit with no digging! Zoo operations resumed as normal the next morning and everyone involved in this project was very impressed."

Steve Worley
Construction Manager, San Diego Zoo

"I had struggled with a horrendous root problem for years before Arrow Perma-lined my lateral from the house to city connection at half the cost of digging. I've never had a problem since and have already referred several of my friends and neighbors."

Gwen Truax
Encinitas

"A" License #811046

Our Process Creates A Pipe Stronger Than The Original And In Most Cases, Can Be Warranted Longer Than NEW Pipe Installation!

PIPE LINING

PROVEN EFFECTIVE!!
Repair Cracked or Broken Pipes Without Major Excavation In Half The Time!

- No Mess, No Re-Landscaping
- Environmentally Friendly
- Durable and Tested per ASTM F 1216
- Proven Solution

Repairing broken or cracked pipes, made of virtually any material, without extensive excavation or property damage is now a reality. Arrow Pipeline Repair now offers a proven, simple solution for repairing lateral service pipelines. This approved Perma-Lateral Lining System, has the National Sanitary Foundation (NSF-14) approval mark for plumbing pipe repairs.

This system is approved and third party tested to meet ASTM specifications. The specifications test our materials to a minimum life span of 50 years.

AREAS OF APPLICATION

Perma-Lateral Lining is a pipeline rehabilitation method for 3", 4", 6" and 8" pipe diameters. Virtually any pipe material can be lined.

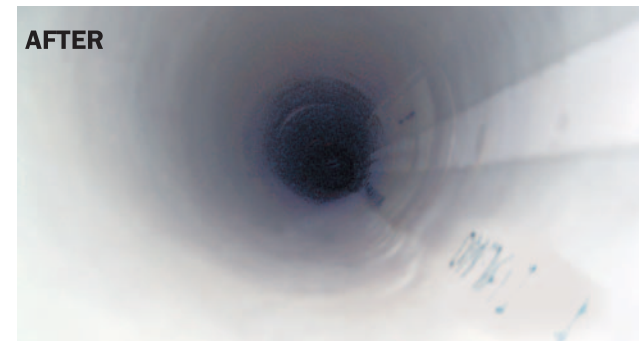

1. Restore cracked pipe
2. Stop infiltration
3. Prevent root intrusion
4. Reduce cleaning costs
5. Extend host pipe life

HOW IT WORKS

The Perma-Lateral System uses a PVC coated polyester needlefelt tube impregnated with a unique liquid resin. The impregnated tube is inverted inside out allowing the resin to bond with the existing host pipe and the PVC coating becoming the smooth jointless inner pipe wall. The special lateral inversion process design allows for 22°, 45°, and sweeping 90° bends to be lined.

The Perma-Liner system is a cost effective method for rehabilitation of virtually any type of drain pipe or line.

The new Perma-Lateral pipe repair system is the Best Alternative to digging up, under or through, property, streets, driveways, sidewalks and lawns. It's guaranteed to be as good or better than replacing broken or cracked pipes and it lasts.

Summary

- Perma-Lateral system is completed in just one day
- Water is off for less than half a day
- No disruption of your normal day to day activities
- Pipes are repaired with little or no digging
- Proven effective Internationally
- Environmentally safe
- Available from Arrow Pipeline Repair
